

MC4U

Power Supplies

The PSM3U line of power supplies generates all drive and control voltages for a MC4U system. Available Power Supplies:

- 8 kW power supply. 120Vdc to 320Vdc nominal drive voltage is generated by rectifying the AC input. It includes an internal 100W shunt/regeneration resistor. If required, an external shunt resistor of 300W or 600W can be connected to absorb more energy.
- 0.7 kW, 48-51Vdc regulated supply with Power Factor Correction (PFC). It is suitable for applications with demanding constant speed regulation and low position jitter requirements. This power supply does not include regeneration circuit.

The MC4U can accommodate one or two supplies, to provide two voltage levels for different motors or to increase the total power.

The PSM3U are fed from a single or three-phase AC source in the range of 100-230Vac nominal voltage and from a 24Vdc. The supply derives the DC voltage for the motor drives from the AC input and all logic and control voltages from the 24Vdc input. During emergency conditions it is sufficient to remove only the AC input, thus keeping all the logic and control circuitry alive. When using high current encoders (such as SIN-COS encoders), it is recommended to feed the encoders from a separate power supply.

Logic Supply Input Specification

- Nominal input voltage: 24 Vdc
- Maximum input power: 144W
- Maximum input current: 5.5A

Standards and Environment Specification

- All power supplies are CE (EMC, Safety) and UL certified and RoHS compliant.

Ambient Temperature

- Operating range: 0 to + 40°C
- Storage and transportation range: -25 to +60°C
- Humidity (operating range): 20% to 95% non-condensing

* 70Vac for PSM3U-100V-3kW

** The power supply consists of 2 independent supplies, which feed the drives connected to them independently.
